

1) The idea here is to stack the post players on one side & then dribble the ball away from the stack.
 2) This will naturally stretch the zone to one side.

1) The ball side wing will cut baseline to the opposite corner, while the other wing follow.
 2) The top post will flash to the high post which should draw the attention of one of the top guards in the zone.

1) If 5 can set a good screen on **x3** along the baseline, 2 might have an open look in the corner.
 2) If a shot isn't there, 5 should step out to the short corner which will put pressure on **x5**.
 3) If **x5** steps out to guard the corner, 4 will slip right to the mouth of the rim in the vacancy.

1) In this frame we look at what could happen if **x3** slips hard to the corner & **x5** cheats up on 4.
 2) This leaves 5 open on the block for a finish.
